

THE POWER OF 8

*We listened
to you . . .
and we made
a good thing
even better.*

Eight channels for platelet aggregation instead of four? An obvious evolution. Lower sample volumes? No problem.

Access to previous test results? We improved the database management. And for good measure, we provided Prism[®] graphical presentation software, which includes a full range of curve-fitting templates. Configure the PAP-8E to work in a tight area? We narrowed its width to 14 inches. It's lighter, too. A touch-screen monitor? Great idea. We jumped on that one.

Some customers asked if they could create their own test. Our engineers saw to that. Could we program the built-in timers to emit an audible alarm when lab results are ready? You bet. And the PAP-8E stops automatically, enabling you to perform other tasks.

Make the PAP-8E easier to use and more convenient? That's for sure. Plus we included an electronic pipettor with memory and a bar code scanner.

Welcome to the new evolution. The Power of 8.

Our 8-channel Platelet Aggregation Profiler runs 8 tests simultaneously.
